

Wings Platinum 4 Configuration options April 2010

With the introduction of **Wings Platinum 4**, a number of different license levels have been introduced. This datasheet provides an overview over the different configurations:

Function:

Single screen display – full screen playback – no user interface visible during playback:

- Starter License
- Advance License
- Pro License

Multi-screen display via single PC (multi-head output or multi-graphic cards):

- Dual license
- Triple license
- Quad license (on Stumpfl hardware only)

Multi-screen display via master/ slave network:

- Multiple- single license
- Combination of single + dual/ triple/ quad license

Show Control extended capabilities:

This module can be added to any license. In multi-display license systems, it is usually only required for the master machine.

VIOSO Camera based calibration and image shaping:

This add-on license extends the image shaping capabilities of Wings Platinum and automates the set-up via camera based calibration/ set-up. Can be added to:

- Pro license
- Dual license
- Triple license
- Quad license

Note: Can not be used in network based master/ slave configuration.

Promter module:

This module enables Wings Platinum to send preview images and notes to a promter via TCP/IP network. The show can be interactively controlled using Play/Pause/Next/Previous functions.

For detailed functionality please request the version document from our offices.
